

Health & Beauty Expo — Rijswijk 2026

Functional Specification & Prerequisites Checklist

1. Introduction

This document describes the new Health & Beauty Expo website for the Rijswijk 2026 edition: a custom-built, five-language event platform that will fully replace the current WordPress site. It explains what visitors and exhibitors will see and do on each page, and how your team will manage the site day to day.

2. Screens & Pages

Homepage

- Presents the Health & Beauty Expo, the Rijswijk 2026 dates and location, and the sectors covered (health, beauty, medical tourism, wellness, cosmetics, innovation).
- Shows the main benefits for visitors and the advantages for exhibitors and partners.
- Displays a selection of featured exhibitors.
- Buttons leading to tickets, exhibitor registration, and participation requests.
- A static "coming soon" section announcing the Paris 2027 edition.
- Fully adapted for desktop, tablet and mobile screens.

About page

- The vision and international positioning of the event.
- The sectors and specialties represented.
- What visitors gain by attending, and what opportunities exist for exhibitors.
- Reuses your existing useful text, rewritten to remove repetition.

Exhibitors page

- A professional listing of exhibitors: logo, company/clinic/brand name, sector, short description, key information, and a contact button where relevant.
- Your team can add, edit, reorder, or remove exhibitors at any time through the admin panel.

Tickets page

- Explains access terms, practical details, dates, times, and location.
- A visible purchase button that sends visitors to your external ticketing platform.
- Ticket payment itself is not processed on this website.

Fair Match page

- Explains the Fair Match service and its benefits for visitors and exhibitors.
- Lists the participating clinics shown on the website.
- A request form where exhibitors choose a clinic and propose a preferred date, time, and contact details.
- Requests appear in the admin panel (and by email) so your team can manually confirm, propose another time, or decline.
- This is a manual request-and-confirm system, not a live booking calendar.

Media / Press / Influencers page

- Reorganised, easier-to-read presentation of accreditation conditions for journalists and influencers.
- A single accreditation request form replacing the current long block of text.

Contact page

- Official address, phone, email, opening hours, and social media links.
- A contact form and a map linked to the official address.

Legal & informational pages

- Privacy policy, cookie policy, terms of use, legal notices, and visitor/exhibitor information, built from content you approve.
- These texts must be validated by you or your legal advisor before the site goes live.

Paris 2027 page

- A simple static "coming soon" announcement. Full management of a second, simultaneous edition is not part of this phase.

Admin panel (for your team)

- Three access levels: Administrator (full access), Employee (day-to-day content and exhibitor updates), and Organizer (limited, event-related access).
- Lets authorised staff update event details, exhibitors, photos/videos, the ticketing link, and view form submissions — without touching any code.
- If a visitor is not logged in as staff, the admin panel is simply inaccessible; only the public pages are shown.

3. User Flows

- Visitor journey: lands on homepage → explores Exhibitors, About or Media pages → clicks Tickets → is redirected to the external ticketing platform to complete purchase.
- Exhibitor / clinic appointment journey: exhibitor opens Fair Match → reviews clinics → submits a request with a preferred date and time → your team reviews it in the admin panel or by email → team manually confirms, reschedules, or declines.
- Press / influencer journey: visits Media page → reviews criteria → submits an accreditation request → your team follows up directly.
- Staff journey: logs into the admin panel → sees only the sections allowed for their role → updates exhibitors, event details, or media, or reviews incoming form requests.

4. What Is Not Included

- Ticket payment on the site and e-ticket generation — tickets remain sold through your external platform.
- An interactive drag-and-drop floor plan — a static, downloadable plan is provided instead.
- An automatic Fair Match matching algorithm or instant messaging — replaced by the manual request form described above.
- A personal exhibitor login/dashboard to track purchased services — this can be scoped as a future phase.
- A dedicated mobile app, multi-edition admin management, advertising/social media management, monthly SEO services, legal drafting, and certified translations — all outside this project's scope.
